

Critical Event Management

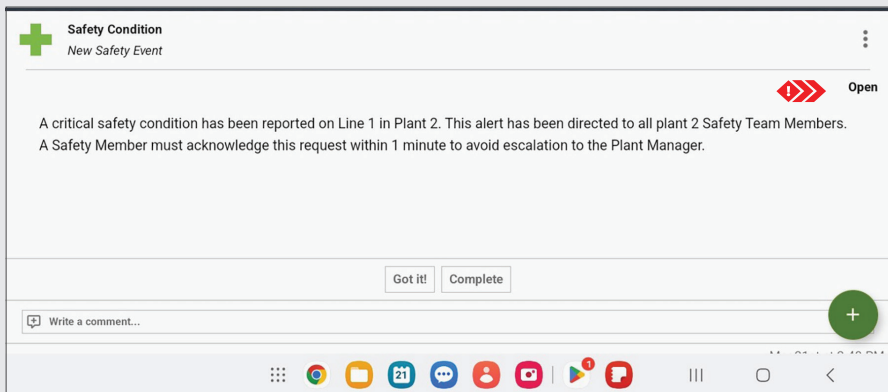

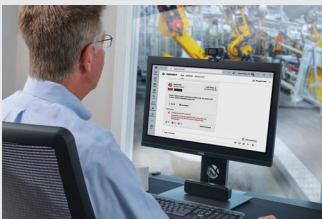

When critical events occur on the factory floor that affect profitability, customer relationships, and the safety of employees, how do you stay informed?

Currently, you may rely on HMI systems and two-way radios to communicate about such events. 2-way radios have limitations: they are voice-only, open-loop, and prone to delays, resulting in significant time lapses. SQUEAKS enables you to stay informed more promptly.

Stay ahead with SQUEAKS. Our system provides immediate, automated notifications and maintains a detailed digital record of every action taken, from initial acknowledgment to final completion ensuring nothing slips through the cracks.

As a Microsoft Teams Add-On, SQUEAKS drives action by directing critical events to the right chats and channels within Teams.

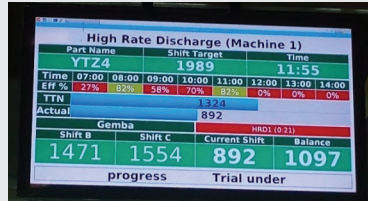

Interactive Visual Management

Manufacturers have consistently utilized visual management solutions such as SQDC boards and Andon systems to reinforce management priorities by visually communicating key performance indicators (KPIs), goals, and progress.

(Paper-Board)

(Andon/Line Display)

Collaboration, however, is restricted to individuals in close proximity to the boards or displays, and the information is limited to a few sources. Moreover, the data on paperboards is static and often outdated.

One-Source leverages mobile devices and digital displays to extend visibility and eliminate proximity constraints. This enables everyone in your organization to work cohesively – we refer to this as **One-Team, One-Source™**.

One-Source allows for a greater variety of information sources, including videos and other rich multimedia content, resulting in more engaging meetings and collaboration, which leads to better decision-making.

Microsoft Teams Add-On

A Microsoft Teams Add-On, One-Source allows you to view all of your sources of information and boards from Teams.
